### **Biosecurity Virkon Footbath Preparation**

When you receive your biosecurity foot bath and Virkon please follow the procedures detailed below.

- Fill the footbath with 3 litres of water.
- Dissolve 1 tablet on 2 litres of warm water.
- Pour the water with Virkon on the footbath and stir.
- Diluted Virkon should not be kept for more than **5 days**, or once colour has been lost.
- You can, of course, amend the volume of disinfectant in the footbath - as long as you use one tablet per 5 litres, it will be the correct concentration, e.g. just use 5 litres and 1 tablet each time.

**Thank you for helping to protect the Falkland Islands Wild-Life**
